

MongoDB Note Taking App Assignment

CPSC513

Using the notes app that we built in class (available on Canvas):

Task 1:

Create a new option to print out all details for some given note. Print out all notes by ID and allow a user to select which note they would like to see all details for.

Task 2:

Create a new option to display each folder and the notes that are within them. Display no ids for folders or notes on the output.

Task 3:

Create a feature that always shows the titles of pinned notes when you open the application

Task 4:

Create two new options, to edit and delete notes. When editing a note, ensure that you are updating the 'updatedAt' attribute to be the current user datetime.

Extra Credit (10 points):

Create the ability to add, update, and delete folders + tags.
